Aryaman Shah
(781)-526-8565 | aryamansh04@gmail.com | Arlington, MA | www.linkedin.com/in/shah-aryaman

Aspiring software engineer with a strong foundation in computer science, driven by a passion for problem-solving, interested in web and software development to develop technical skills further while creating impactful solutions that contribute to society.

EDUCATION

University of Massachusetts Lowell | Lowell, MA — Expected Graduation: May 2027
Bachelor of Science in Computer Science – General — GPA: 3.1
Related Courses: Assembly Language, Data Structures & Algorithms, Object-Oriented Programming, Logic Design, Computer Architecture, Organization of programming languages, Computing for Health and Medicine

Work Experience

Tatte Bakery & Cafe — Arlington, MA
Barista / Team Member — April 2025 – Present
- Managed high-volume customer flow during peak hours, demonstrating accuracy and composure under pressure
- Collaborated with a ream to ensure timely order delivery and maintain a clean, organized environment
- Built strong communication skills through direct customer interaction and conflict resolution

Uplifty AI — Remote
Software Engineer Intern — November 2025 – April 2026
- Built and maintained cross-platform iOS and Android mobile applications using React Native, delivering performant UI with clean design
- Collaborated with cross-functional teams to implement new features and improve existing mobile workflows
- Debugged and optimized mobile code, reducing load times and improving overall user experience.

Technical Skills

Programming Languages: C/C++, JavaScript, HTML, CSS, Python, React Native
Tools: VS Code, Visual Studio, Android Studio, SFML, joblib, Gmail API
Languages: English (Fluent), Nepali (Native)

Projects

Smart Email Sorter | Python, Gmail API, scikit-learn — October 2025
- Built a modular Python app that classifies Gmail messages into categories using a Naive Bays classifier and TF–IDF vectorization.
- Integrated Gmail API to fetch messages parse metadata, and apply category-specific labels
- Implemented persistent model storage with joblib and structured logging.

Planet Simulator | C++, SFML — March 2025
- Designed and developed a real-time planet simulator modeling orbital mechanics using complex physics and math in C++
- Used SFML to render smooth, accurate visualization of planetary rotations and orbits across the solar system

Leadership & Activities

Association for Computing Machinery (ACM), UMass Lowell — **April 2025 – May 2026**
- Serve as Director of Partnerships for the UMass Lowell ACM chapter, creating networking opportunities and coordinating events that connect students with alumni and industry professionals
- Facilitate relationships with tech companies and organizations to bring speakers, workshops, and career resources to chapter members
